

New mould?

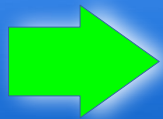

Achieve the exact surface you need —
with repeatable results every time!

Surface finishing for new moulds and inserts:

Professional manual surface finishing, technical consultation and documented work processes.

- ✓ 5S-based, own working system;
- ✓ Documented work processes, traceability and warranty
- ✓ Even years later reproducible results
- ✓ Decision support and continuous communication

- ✓ Less unnecessary costs
- ✓ Less post-processing or rework
- ✓ More predictable project execution
- ✓ Surfaces matched precisely to requirements

Complex services:

- ✓ 20+ years of experience in moldmaking and polishing
- ✓ Documented and traceable processes
- ✓ Consultation to help reduce costs
- ✓ High-quality surface finishing down to ¼ micron
- ✓ Line finishing, release assistance and technical polishing
- ✓ Delivery and on-site polishing
- ✓ Price guarantee and committed delivery deadlines
- ✓ Fixed appointment booking available

Tools and equipment:

- ✓ Novapax, JoKe, Ramseier and Jutz products
- ✓ Urawa Minitor system
- ✓ Custom-built machines and special tools
- ✓ Dino-Lite digital microscope
- ✓ Dedicated workshop with optimized lighting for inspecting light reflections

Industries served include:

- Plastic injection
- Extrusion
- Vacuum moulds
- Aluminium die casting
- Press tools
- Medical technology
- Automotive industry
- Household products
- Electronic devices
- Composites

Structured collaboration, comprehensive system, flexibility

- ✓ I continuously document my work from the very beginning.
- ✓ Photos and documentation are created throughout the work process.
- ✓ The results remain reproducible even years later.

➔ I provide a quotation including the estimated lead time, based on 3D models, technical drawings or photographs, following consultation by e-mail, telephone or in person.

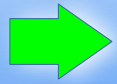

➔ Flexible delivery options – personally by me
– by the customer
– or courier service

➔ My capacity can be booked either flexibly or for a fixed date. For further details, please contact me using the contact information provided.

The question is: When and why is an external surface finishing specialist the right choice?

My answer is:

- ✓ Dedicated workshop with optimized conditions
- ✓ Continuous hands-on experience
- ✓ Expertise and personal responsibility
- ✓ Control, documentation and structured system

I maintain up-to-date, continuous hands-on experience in surface finishing.
I free up capacity for your other manufacturing processes.

You do not need to maintain capacity, equipment and a dedicated working environment that are only required occasionally, avoiding permanent operating costs.

In addition to expertise, the quality of surface finishing is also influenced by the right working environment and reproducible work processes – all of which are continuously available in my workshop.

Control remains. The problem does not!
